platform roles

16

screens

Eight roles across the platform

MyThuso separates clinical care, operations and governance into distinct, least-privilege roles. Every screen in this flow is rendered for one of the eight roles below.

1 Super Admin

Full platform ownership: configuration, tenancy, system-wide policy and governance.

2 Admin (Clinic Ops)

Runs a clinic: scheduling, staff rostering, patient intake and daily operations.

3 Clinical Lead / Nurse

Delivers and oversees care: visits, clinical records, triage and escalation.

4 Dispatch Operator

Coordinates field response: assigns nurses and ambulances, tracks live movement.

5 GilbertOne Platform Operator

Manages the assistant engine: knowledge, tools, safety gates and model routing.

6 Sponsor

Funds care for others: subsidises patients, programmes and household health plans.

7 Patient

The person receiving care: books services, views their passport and talks to GilbertOne.

8 Family

Supports a patient: shares care visibility, next-of-kin alerts and household coordination.

Onboarding

The first-run journey that registers a patient, captures consent and establishes their household — the entry point into the MyThuso care continuum.

Booking Flow

Lets a patient find a service, choose a time and confirm a visit, feeding directly into clinic scheduling and field dispatch.

PATIENT & CONSUMER EXPERIENCE

Patient Dashboard

The patient's home surface: upcoming care, live vitals and quick actions, with the GilbertOne assistant always one tap away.

03

PATIENT & CONSUMER EXPERIENCE

Health Passport

A portable, patient-controlled record of visits, vitals, medications and immunisations that travels with them across providers.

04

GILBERTONE ASSISTANT

GilbertOne Disclaimer

The consent and safety gate shown before the assistant conversation begins, setting scope, privacy and emergency-escalation expectations.

05

GILBERTONE ASSISTANT

GilbertOne Chat

The conversational assistant surface where patients ask health questions and are triaged, with refusals and emergencies handled deterministically.

06

CARE & EMERGENCY

Video Consultation

A real-time teleconsult between patient and clinician, bringing remote care into the same record as an in-person visit.

07

Nurse Workspace

The clinician's operational view: assigned visits, patient records, triage queues and escalation controls for delivering care in the field.

The screenshot displays the mythuso Nurse Workspace interface. On the left is a dark teal sidebar with the mythuso logo and a menu of options: Today's Visits (selected), Visit Queue, Capture Notes, Patients, Medications, Escalations (with a red badge showing '2'), Device Lab, and Settings. At the bottom of the sidebar is a profile card for Nurse Thandi Mokoena, RN • SANC 48291, with a green status indicator.

The main content area has a header for 'Today's Visits — Wednesday 23 Sep' with a bell icon, a notification icon, and a summary of '4 visits • 2 completed'. Below this is a list of four visits, each with a patient photo, name, task, status, and time/location details:

- Gogo Nomsa Dlamini**: Chronic care review, Completed, 08:00 – 08:45 • 14 Vilakazi St, Soweto. Includes a 'View notes →' link.
- Mr. Jabu Khumalo**: Wound dressing change, In progress, 10:00 – 10:30 • 82 Mooki St, Orlando East. Includes an 'Open capture →' link.
- Ms. Anika Petersen**: Post-natal check (day 5), En route in 40 min, 13:00 – 13:45 • 12 Crown Ave, Crown Gardens. Includes a location pin icon.
- Mr. Raj Naidoo**: BP monitoring + meds review, Scheduled, 15:30 – 16:15 • 45 Main Rd, Lenasia.

On the right side of the main area is a 'GilbertOne Triage Pack' panel. It features an 'AI pre-assessment' section with a robot icon, followed by clinical details: 'Chief complaint: diabetic foot ulcer, left heel', 'Duration: 12 days', 'Severity: 6/10 (amber)', and 'Red flags: none detected'. It also shows 'Last vitals: BP 142/88, HR 84, SpO2 97%'. At the bottom of this panel are two buttons: 'Clinician confirmation required' and 'Override assessment'.

CARE & EMERGENCY

SOS / Emergency

The panic and emergency surface that raises an alert, notifies next-of-kin and dispatches emergency response with live location.

09

Super Admin Console

The system-wide control centre for platform configuration, tenancy, feature flags and governance across all MyThuso services.

Admin (Clinic Operations)

The clinic management surface for scheduling, staff rostering, patient intake and day-to-day operational oversight.

Roles & Permissions

Defines and audits the eight platform roles and their granular permissions, enforcing least-privilege access across every surface.

GilbertOne Admin & Configuration

The standalone console for the GilbertOne API engine: knowledge sources, tool configuration, safety gates and model routing.

The screenshot displays the GilbertOne Admin & Configuration console. The interface features a dark blue sidebar on the left with navigation links: Overview, API Keys, Model Tiers, Speech Config, Plugins & Skills, Escalation Rules, Guardrails, and Analytics. The main content area has a white header with the GilbertOne logo and 'mythuso. powered by'. Below the header, there's a 'GilbertOne Admin' section with a status indicator 'assistant-api online · 127.0.0.1:8791 uptime 99.98%'. A table lists API keys with columns for key name, ID, and a 'revoke' button. Below this, there are four cards for model tiers: Local Ollama tier, Cloud tier, Cloud tier, and Cloud tier, each showing latency and accuracy metrics. To the right, the 'Speech Configuration' section includes a dropdown for 'en-ZA-LeahNeural', a 'wake-word' toggle set to 'ON', a 'push-to-talk' toggle, and a '45s utterance cap' dropdown. Further right, the 'Plugins allowlist' section shows a list of plugins with status indicators (approved, revoked). At the bottom, the 'Escalation Ruleset' section displays a flowchart with three paths: emergency, urgent, and routine. A 'Preview in' button is visible at the bottom left of the Escalation Ruleset section.

Mapping Module (Live Dispatch)

A live geographic view of field assets and active cases, giving dispatch real-time situational awareness across the service area.

Dispatch Operator Workstation

The operator's console for triaging incoming requests, assigning responders and monitoring each case from alert to resolution.

Control Tower

The command-level overview aggregating demand, capacity and active dispatch across regions for coordinated operational control.

NEXT STEPS

Where this design goes from here

- **Founder sign-off pending**

This PDF compiles the approved v2 concept screens and awaits founder sign-off before build.

- **Concept renders, not pixel-final**

Screens are realistic concept renders for flow validation — not yet built pixel-for-pixel in product.

- **SMS provider decision**

Open item: choose an SMS provider (Azure Communication Services does not support South African numbers).

- **Ambulance partner contract**

Open item: emergency dispatch depends on a signed ambulance / response partner agreement.

- **Azure Speech DPIA**

Open item: a Data Protection Impact Assessment is required before enabling cloud speech for GilbertOne.
